FETAL MEDICINE / AMERICAN ASSOCIATION OF
OBSTETRICIANS AND GYNECOLOGISTS FOUNDATION
SCHOLARSHIP (FOUNDATION FOR SMFM/AAOGF)**

2026

History

The American Gynecological and Obstetrical Society evolved from a merger in 1981 of the American Association of Obstetricians and Gynecologists, an organization founded in 1888, and the American Gynecological Society, founded in 1876. The goals of both organizations were similar, being to enhance knowledge in the field, encourage transmission of current knowledge, and recruit talented individuals to Obstetrics and Gynecology.

The American Association of Obstetricians and Gynecologists Foundation (AAOGF) was incorporated in 1929, to serve as a mechanism to support the annual Joseph Price Oration and then to establish an annual Prize Award for a manuscript presented at the meeting. The resources of the Foundation have been enhanced significantly by bequests from the estates of Dr. James Kennedy in 1966, Dr. Walter Dannreuther in 1969, Dr. J. Bay Jacobs in 1989 and Dr. Henry L. Darner in 1996. To accomplish the mission, the primary focus of the AAOGF is the support of research training scholarships for individuals pursuing an academic career in the specialty. Since 1998 the American Board of Obstetrics and Gynecology has very generously contributed to the support of the scholarship program, and currently participates with the AAOGF in jointly funding one new scholar per year. The Foundation for the Society for Maternal-Fetal Medicine (Foundation for SMFM) has offered scholarships to Maternal-Fetal Medicine trainees since 1992. In 2003, the Society for Maternal-Fetal Medicine and the AAOGF agreed to jointly sponsor a scholarship to be awarded to an Obstetrician Gynecologist who has training and a commitment to performing research in Maternal-Fetal Medicine. In 2019, the GOG Foundation began funding the inaugural Career Development Award aimed at fostering clinical trialist development in Gynecologic Oncology. This award is offered every three years and will next be available in 2028.

The scholarships are specifically designated in recognition of the source of support for the various scholarships.

Call for Applications for ABOG/AAOGF, and the Foundation for SMFM/AAOGF Scholarships

The AAOGF, the Foundation for SMFM, and ABOG seek to identify future academic physician leaders in the field of Obstetrics and Gynecology and to stimulate their scholarly development through the support of advanced scientific training. The Scholarship Award is to be used in an academic Department of Obstetrics and Gynecology in the United States or Canada to provide **research training** and experience for a candidate of proven ability who exhibits significant talent, original thought, and evidence of dedication to an academic career. Research training may focus on basic or translational research, disease pathogenesis, clinical diagnostics, interventions and prevention, epidemiology, and health services research.

The Awards

The total annual funding for each scholar is \$150,000. Sufficient funds to support travel to the annual fellows' retreat are included and must be set aside. The balance of funds may be used for salary, technical support, and supplies. The award that is co-sponsored by ABOG is made under the direction of the AAOGF Scholar Committee. The co-sponsored FSMFM award is under the direction of the Foundation for SMFM Scholarly Activities Committee.

The ABOG/AAOGF award and the Foundation for SMFM/AAOGF awards are intended to fund three consecutive years of research and research training based on the proposed application. The initial award is for one year and is renewable annually for two additional consecutive years of research training, based on satisfactory progress of the scholar in meeting programmatic requirements and on the availability of funds. Only one year of the three funded years may be part of a subspecialty fellowship-training program. Indirect costs are not provided.

Recipients must agree to provide career development reports and follow-up after the conclusion of the scholarship on an annual basis and as requested.

It is expected that the scholarship training will be conducted at the same institution for the entire period of funding. Transfer of institutions or change of mentors during the period of funding must receive the prior approval of AAOGF and the respective co-sponsor. Changes in research focus from the original proposal must receive approval of AAOGF and the respective co-sponsor before second- and third-year funding is released. Unexpended funds must be returned to the sponsoring organization unless approval is granted for an extension of the training period. Upon official acceptance of this award, scholars may not apply for other career development scholarship programs.

Eligibility

All physicians who have completed residency in obstetrics and gynecology in the United States or Canada are eligible to apply if they do not have any of the following exclusions. Candidates who have had no more than 2 years of **prior** K-award training (e.g., institutional K12, K08) are eligible to apply, but candidates who *currently* hold BIRCWH, WRHR, RSDP or other K12 awards are not eligible. Prior or current R01 grant recipients are ineligible for Foundation funding. The Foundations scholarship awards do not preclude applying for additional research funding from other sources (e.g., an NIH R03, R21 or the like) the acceptance of which would not jeopardize continued funding or renewal of this award, as long as the minimum of 75% effort is protected for the approved Foundation research project. Such applications are encouraged and plans for pursuing such subsequent research funding should be

addressed in the application. If the applicant has questions regarding their eligibility, they should contact the Scholar Committee Chair. AAOGF will only accept one submission per applicant.

Application Requirements

Candidates must have been awarded an M.D. (or D.O.) degree and must be eligible for the certification process of ABOG at the time of the award. This award is not intended to fund clinical training leading to specialty or subspecialty certification. However, applicants who are in their second year of an ABOG-approved fellowship can apply for funding through this mechanism to start their training in the third year of fellowship, provided that year is devoted to the approved research project for at least 75% of the year. In addition, candidates for the Foundation for SMFM/AAOGF scholarship must be members of the SMFM. **Eligible applicants may use the same application for both the ABOG/AAOGF and/or the Foundation for SMFM/AAOGF awards, but will need to submit through each Foundation's electronic system separately. Applicants are also encouraged to consider funding opportunities from the Reproductive Scientist Development Program (RSDP).** Because of the desirability of early training in scientific principles, residency programs possessing the necessary flexibility and resources are urged to notify their residents of the availability of these scholarships.

At least 75% of the candidate's efforts should be spent in research training and the conduct of the proposed and approved research project, which may occur in facilities either within or outside of the sponsoring Department of Obstetrics and Gynecology. Collaborative efforts with other departments (e.g., Pharmacology, Molecular and Cell Biology, Genetics, Immunology, Biochemistry, or Epidemiology) would be a desirable part of the program.

Applications for the subsequent academic year will be accepted only if the application is received electronically by July 1, 2026. There is no application form; however, an application format is provided at the end of this announcement. The application must be countersigned by the candidate, the Chair of the sponsoring department, and the institutional Signatory Official. The following materials must be submitted for the application to be considered complete and be reviewed for funding:

1. A description of the candidate's qualifications, including a curriculum vitae (complete, not merely-NIH biosketch style), bibliography, prior training, past research experience, and evidence of completion of residency training in obstetrics and gynecology or expectation of completion of residency training in obstetrics and gynecology prior to the start of the award. The basis for the sponsoring department's selection of the candidate should be clear, including future plans for development and faculty appointment or placement. Short and long-term career development plans should be specified.
2. A comprehensive description of the proposed training program, including planned didactic experience, and formal didactic courses. The latter should include at least two formal graduate level courses in areas relevant to the scholar's area of interest. Applicants who have completed Master's degree or Ph.D. coursework have fulfilled this requirement and are not required to enroll in formal didactic courses, but are recommended to do so in order to advance their knowledge. Classes must include an exam and a passing grade documented by a letter signed by the course director. Additional components can include: structured conferences, specific laboratory responsibilities, and the extent of non-research related clinical responsibilities. This didactic plan should be consistent with the career development plan.
3. The research project should be described in detail using an NIH grant format but should not exceed 6 pages (with 0.5-inch margin), using number 11 Arial font, including all figures and tables but not

bibliography. The goals of the training program and the means of evaluation of productivity and success in meeting these goals must be clearly stated.

4. A description of departmental resources appropriate to the training, including the full-time faculty member responsible for serving as the training mentor, must be provided. The mentor's *NIH-style* biosketch (which should include a list of current extramural funding), a list of past trainees, and a letter of commitment are required.
5. The proposed mentor must provide a detailed mentoring plan that includes methods of assessment, expected milestones, and remediation plans if training targets are not met. In addition, a list of any other faculty members with whom the trainee will work, with particular emphasis of their prior experience in mentoring and their time commitment to this undertaking, should be included. Finally, the mentor should make note of available research space, equipment and general resources as well as an account of prior training experience within the unit, and the existence of other departmental support resources.
6. A list of other research grants, training grants, or scholarships previously or currently held by the applicant must be provided. Please include a list of all applications by the candidate that are currently pending review. We also highly encourage our scholars to apply for a K-level or an R01 grant (or the like) as PIs. Once the K grant (or other career development award) or R01 is funded with the scholar serving as a PI, the support from the AAOGF scholarship training program will end, irrespective of the % effort allocated to the K grant (or to the other career development award) or R01 grant.
7. A budget should be provided. As noted, the award may be used for salary support of the scholar, purchase of equipment and supplies, research assistant salaries and/or services and travel expenses related to research training. Planned expenditures should be listed under the following headings: salaries (by individual), supplies, equipment, services, and travel. *Please note that no indirect costs will be paid.*
8. Documentation of approvals from the Institutional Review Board (Human Subjects) and if applicable, from the Institutional Animal Care and Use Committee can follow NIH "just in time" approval rules. However, following granting of the award no funding will be released until full documentation of the necessary approvals are received by the respective Foundation.
9. Applications for the Foundation for SMFM/AAOGF award should focus on an area of relevance to the discipline of Maternal-Fetal Medicine or Obstetrics pregnancy-related fields. Applications for the ABOG/AAOGF award should focus on research in any field of Obstetrics and Gynecology.

Evaluation of Applications

The evaluation of applications will be conducted by committee(s) and will be based on:

1. The scholarly, clinical and research qualifications/promise of the candidate, including evidence of the candidate's commitment to an investigative career in academic obstetrics and gynecology in the United States or Canada.
2. Qualifications of the sponsoring department and mentor(s) with respect to research experience, grant track record, prior research mentoring, adequacy of opportunity for appropriate collaborative relationships, facilities, and other appropriate resources.

3. The overall quality of the mentoring plan.
4. Ascertainment and guarantee that 75% of time and effort of the candidate will be dedicated to the research training and the conduct of the research that was approved.
5. The quality of the research project, including evidence that the applicant is either performing an originally conceived project or taking on an area of interest of the mentor that represents a significant new direction.
6. The accuracy and completeness of the application.
7. An interview may be required as part of the evaluation process. After an initial review of applications, the most competitive applicants may be invited for a virtual interview. The Committee may also elect to interview the mentor.
8. Investigators belonging to under-represented groups are strongly encouraged to apply. For the purpose of this award under-represented is defined as someone whose racial or ethnic make-up includes the following: African American/Black, Asian, Hispanic/Latinx, Native American/Alaskan Native, Native Hawaiian, and other Pacific Islander or two or more races.
9. The Committee reserves the right not to fund any applicant if none of the applications meet the standards of the Committee for acceptance.

Monitoring of Scholars

The recipient of the award must submit an interim progress report by May 1 of the first and second years of award, and a final report by August 15 after completion of the award. All three reports should be countersigned by the faculty mentor and should include a monetary accounting of the funds awarded. The progress reports should include activity reports (see last page of this booklet – Word versions will be provided) as well as a narrative summary of up to 2 pages, following the narrative section of the standard NIH format for annual grant renewal. The sections of the narrative report include:

1. What are the major goals of the project?
2. What was accomplished under these goals?
3. What do you plan to do during the next reporting period to accomplish the goals?

The progress report should detail the candidate's achievements and the projected plans for the succeeding year for first- and second-year scholar reports. The reports should include any significant changes in departmental resources, which might affect the program, such as change of mentor or collaborators, altered funding, change of chairman, etc. Changes in the program that deviate from the original application require the approval of the AAOGF and the Foundation for SMFM. The recipient of the Foundation for SMFM/AAOGF award must send reports to awarding Foundations. The recipient of the AAOGF/ABOG award will send their report to AAOGF.

In the spring or early summer following receipt of the award, a member of the Foundations scholar committee will schedule a structured site visit for the respective scholar. The scholar must provide site visitors with a progress report prior to the visit. The scholar will receive specific metrics that must be addressed during the time of the site visit. The Foundation for SMFM/AAOGF scholar will also meet with representatives of the Scholarly Activities Committee at the annual SMFM Pregnancy Meeting to discuss progress.

The AAOGF grants are separated into stages with a rigorous evaluation process between the stages. Stage I will conclude at the completion of the first site visit and review of the first progress report. The progress report and site visit must demonstrate that the scholar is meeting the specific research aims as outlined in the grant application, as well as meeting the mentor's milestones defined at the outset of the award. If the scholar has not made sufficient progress, funding may be continued for a limited period (e.g. 6 months) and the scholar given notice that improvements must be made. A scholar given a limited extension for remediation will be asked to submit an interim progress report and a repeat site visit may be required before authorization is given for additional funding. Stage II will consist of continuation of funding in year two and year three based on annual progress reports demonstrating sufficient progress toward completing the remaining project objectives.

Scholars are expected to attend an annual retreat in all grant years and in the year following the completion of the year 3 award to present the progress of their work. Funds must be set aside from the award to support attendance at the retreat. Failure to attend the retreat may jeopardize renewal of funding.

Preparation and submission of an extramural grant request with the assistance of the scholar's mentor is viewed as an essential element of the training experience and is an expected outcome of the scholarship.

Following completion of the scholarship, the awardees will be invited to the annual meeting of the American Gynecological and Obstetrical Society (AGOS) to present the work accomplished during the award period. This presentation is a requirement for successful completion of the scholarship. The Foundation for SMFM/AAOGF scholars are expected to submit abstracts concerning the work accomplished during the period of the award for peer review by the SMFM.

All submissions and inquiries regarding the scholarship should be directed to:

APPLICATION FORMAT (Please use Fonts – Arial 11)

- I. Cover Page
- II. Candidate qualifications
 - A. Complete curriculum vitae with bibliography, past research experience
 - B. Record of other research and/or training grants or awards - past and pending
- III. Letters of support and commitment (must accompany application)
 - A. Chair, Department of Obstetrics and Gynecology
 - i. Should include the basis for the sponsoring department's selection of the candidate and future plans for development and placement
 - ii. Should also confirm that at least 75% of the candidate's efforts will be spent in research training and the research project that was approved.
 - B. Mentor(s)
 - iii. Should include a stated commitment to the candidate's program and training
 - iv. Should describe mentoring plan and evaluation including proposed means of evaluating productivity, and how it fits the career development plans
 - v. NIH style biosketch
- IV. Description of training program (2-3 pages)
 - A. Formal course load
 - B. Structured conferences
 - C. Laboratory responsibilities
 - D. Non-research related clinical responsibilities
- V. Resources (1 page)
 - A. Space
 - B. Equipment
 - C. Other departmental support resources
- VI. Research proposal (Section A-D 6 pages not including bibliography)
 - A. Abstract and specific aims
 - B. Significance
 - C. Approach (including a timeline)
 - D. Selected Bibliography
- VII. Budget*
 - A. Personnel salary support
 - B. Purchase of equipment and supplies
 - C. Technician salaries
 - D. Services
 - E. Other items (specify)
 - vi. *Total annual funding to scholars will be \$150,000. Sufficient funds to support travel to the annual fellows' retreat must be set aside. The balance of funds may be used for salary, technical support, and supplies.
- VIII. Documentation of approvals (Just in time format)
 - A. Institutional Review Board (Human Subjects)
 - B. Institutional Animal Care and Use Committee
